EDUCATION

University of Virginia

Expected: December 2028

B.S. in Commerce, McIntire School of Commerce & B.A. in Computer Science

GPA: 3.974

- **Relevant Coursework:** Data Structures & Algorithms, Discrete Math, Software Development Essentials, Computer Systems, Commerce, Microeconomics, Multi-variable Calculus

EXPERIENCE

Software Engineering Intern

May 2026 – Present

A4 Solutions LLC

- Cut customer information retrieval time ~60% by architecting backend services for a multi-agent healthcare platform, orchestrating three Python agents across AWS Lambda and Step Functions
- Delivered grounded AI responses from enterprise healthcare data in under 30 seconds by designing a Retrieval-Augmented Generation pipeline on Amazon Bedrock, with OpenSearch retrieval and Textract document ingestion
- Automated document ingestion and inference for a production platform by building event-driven microservices on ECS Fargate, triggered through EventBridge with S3 and DynamoDB for storage

Software Engineering Intern

Jun 2024 – Aug 2024

National Geospatial-Intelligence Agency

Springfield, VA

- Gathered requirements from 7+ stakeholders and translated executive planning needs into a SQL- and VBA-based data pipeline that integrated 2 large operational datasets into reproducible forecasting outputs
- Prioritized automating data ingestion and reporting workflows, cutting processing time by 50% and improving report accuracy by standardizing validation and removing manual reconciliation
- Defined output requirements with stakeholders and delivered executive-facing summaries that informed scenario-based funding and operational planning decisions

Team Lead

Oct 2025 – Present

Blockchain Club

Charlottesville, VA

- Led a team of 3 analysts to evaluate 2+ blockchain protocols per week (L1, L2, L3), producing investment theses that drove allocation decisions for a 6-figure student-managed fund
- Scoped and ran technical and market analysis of 20+ digital assets, weighing consensus mechanisms, scalability, and adoption metrics to prioritize high-potential infrastructure projects
- Synthesized tokenomics, risk profiles, and protocol design into clear recommendations on long-term viability for a non-technical decision-making audience

PROJECTS

AgentGuard | *AI Agent Safety Middleware, OpenAI, Gemini*

- Identified prompt-injection and unsafe agent actions as an unaddressed risk for teams deploying LLM agents, then scoped and built a policy-enforcement gateway to make agent behavior auditable before execution
- Designed a hybrid rule-based + LLM evaluation engine using OpenAI and Gemini APIs with retrieval over a vector store of attack patterns to classify unsafe behavior and generate reproducible ALLOW/DENY audit outputs
- Built modular middleware compatible with multiple agent frameworks, prioritizing repeatable evaluation workflows and real-time monitoring to support a developer-facing use case

Kairo.ai | *Flask, React, Supabase, Solidity, web3.py, Docker*

- Founded and defined the product for an AI system that converts user ideas into Web3-ready frameworks, prioritizing architecture, feature specs, and tokenomics to compress early-stage engineering work
- Implemented Solidity compilation and Sepolia testnet deployment with web3.py, generating verifiable contract addresses to validate builds and reduce time-to-market for users
- Shipped an end-to-end product with Flask + React, Supabase-authenticated storage, and Dockerized deployment on Vercel, owning scope from concept through release

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C, SQL (Postgres), VBA, Solidity

AI/ML: LLMs, RAG Architectures, Vector Databases, Semantic Search, Prompt Engineering, OpenAI API, Anthropic API, Gemini API

Developer Tools: AWS, ECS, Terraform, Docker, Git, Github Actions, Postman, Databricks, Supabase, Vercel, Jira, Claude Code, Codex

Libraries/Frameworks: React, FastAPI, Flask, Node.js, Pandas, NumPy, web3.py, Axios
